

In the Specification:

Please replace the paragraph beginning at page 4, line 9, with the following rewritten paragraph:

B' -- The novel lofty warning devices (e.g. 10) for typical walking shoes (e.g. 5) essentially comprise one or more lofty and horizontally vibratory columns (preferably of helical construction) that are respectively relegatively attached to the rear-end portion of the walking shoe lower-base (5) and extending loftily therefrom and even loftily above the walking shoe foot-rest surface (8). Each such lofty and springy upright column (e.g. 11) topically carries a visually bright ornamental feature (e.g. 19). Such bright ornamental characteristic is alternatively provided by: some structurally inherent nature e.g. chemical phosphorescence; or alternatively, a chemical storage battery (e.g. 12) having an electrically conductive stance with an incandescent bulb (e.g. 16) carried by the ornamental feature (19).
